

## Dreading the Replacement of Your Phone System?

If your existing business phone system has been in the building longer than you can remember or does not have the features you need for a changing world, you may be facing the daunting task of looking for a replacement.

Traditional hardware phone system replacements are often put off long past the time to make a move, simply because of the difficulty in making a decision and the large cost of the hardware. There are also many new factors to consider including potential remote employees and new VOIP and cloud options.

Things have changed in the world of telephone systems, and very much for the better, IF you can navigate the sea of terminology, a multitude of options and multi-year contracts with potential false promises.

As your Technology Success Partner, Frankel Zacharia Technology Services works with a wide range of technology solutions, including “next-level” systems which allow you to:

- Implement advanced phone features such as call following, mobile device integration, automated attendants and call queues.
- Roll out a new system in an efficient and effective manner alongside your existing system to make the transition less stressful.
- NOT be locked into 3-5 year contracts tying you to technology that may or may not be a fit for you now or in the future.
- NOT sacrifice call quality or portability
- Work with a hundred of different physical handsets
- Are often a fraction of the cost of traditional systems.

There is no such thing as a “one-size-fits-all” solution when it comes to technology, but when properly implemented, cloud telephone systems can be an effective solution for nearly any size or type of business.

We believe in helping you get real results from your technology. If you are dreading the process of replacing your aging or inadequate phone system, give me call at 402.963.4375 or email [tweidman@fzacpa.com](mailto:tweidman@fzacpa.com) and I would be glad to discuss this or any other technology needs for your organization
